

Extreme Overlays

CR-Extreme Overlays system is a decorative overlay system designed to create a new surface to begin a new look, style and feel to existing concrete. The overlay is a strong, thin and durable system, with a surface strength twice that of regular concrete.

While our CR-Heritage Collection is a specific product line for Concrete Revolution, LLC, it is an overlay system. Our CR-Extreme Overlays process enhances the CR-Heritage Collection by providing additional decorative carvings to the process. Available in a wide variety of options, you can choose from numerous patterns: bricks, tile, flagstone, small squares, large squares, borders or many combination efforts. Your imagination is your limit.

What separates CR-Extreme Overlays from other similar products? It's simple - our experience. No design is too complicated. With nearly a decade of experience, we have performed hundreds of solutions, both complex and simple.

CR-Extreme Overlays provide the confidence and proven results that consistently meet the quality expectations of our team and trusted clients.
